New release of SEL Meter Reports Software enhances site-wide resource visualization

The latest release of ACSELERATOR® Meter Reports lets utilities and industries customize their metering reports and facilitates site-wide campus monitoring. A demo download is available.

PULLMAN, Wash. — November 11, 2015 — Schweitzer Engineering Laboratories, Inc. (SEL) today announced a new release of its ACSELERATOR Meter Reports SEL-5630 Software. This latest version includes support for dynamic viewing tools, faster database interrogation and offline demonstrations.

ACSELERATOR Meter Reports Software helps users organize, visualize and optimize energy usage, using data from SEL-734 Advanced Metering Systems, SEL-735 Power Quality and Revenue Meters and SEL-751A Feeder Protection Relays.

“To drive down operating costs, it becomes really important to manage energy usage and reduce peak demands,” said Product Engineer Anaisha Jaykumar. “A monthly bill doesn’t provide this information. Identifying opportunities for energy management improvements requires looking at the data on a minute-by-minute basis.”

ACSELERATOR Meter Reports Software trends energy consumption data, so operators can avoid peak demand charges and optimize a schedule that moves overlapping electric processes to off-peak hours.

Additionally, the software offers tools to diagnose voltage disturbances using historical data, so the user can assess the impact and improve system operation.

Interactive charts offer tools to add annotations and markers and to control the time range of the view.

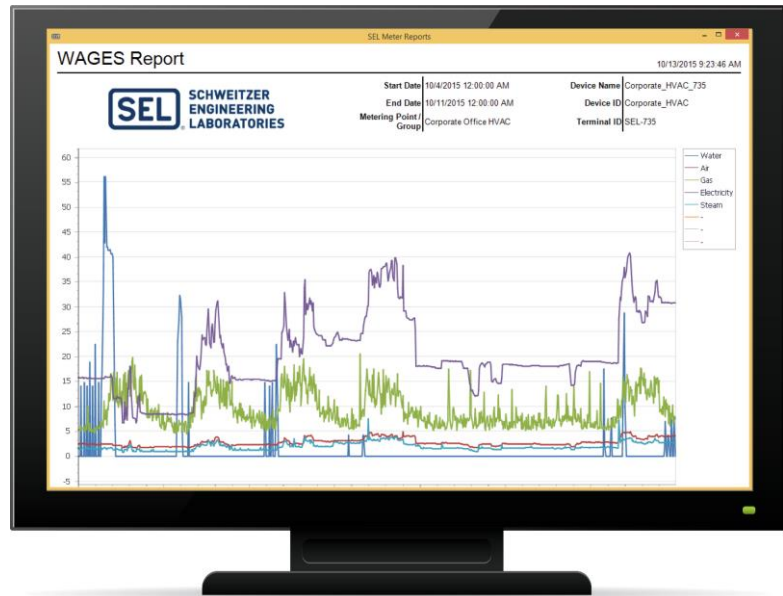

Making Electric Power Safer, More Reliable, and More Economical®

The latest release of ACSELERATOR Meter Reports is accompanied by an integrated demonstration database. This feature gives anyone with a mySEL account the opportunity to download and evaluate the new features at no charge. The built-in sample database replicates a real-world metering system, so it can operate without an active ACSELERATOR TEAM® SEL-5045 Software connection.

The demo database includes seven standard report types and a report designer to create customized views:

1. Device Overview
2. Sequential Events Recorder
3. Load Data Profile
4. Energy Balance
5. Water, Air, Gas, Electricity, and Steam (WAGES)
6. Voltage Sags, Swell, and Interruption (VSSI) Summary
7. VSSI Detail

With ACSELERATOR Meter Reports, anyone can visualize data, filter events, add labels to data points and find the max, min or difference in a user-friendly interface. This is especially valuable to facility owners, who increasingly rely on resource usage to drive planning, operating and accounting decisions.

Operators can monitor the cost of metered resources for each building on a university campus or in a business complex.

For more information on the features, benefits and applications or to download a no-risk trial version, visit www.selinc.com/p235.

SEL serves the power industry worldwide through the design, manufacture, supply and support of products and services for power system protection, monitoring, control, automation, communications and metering. For more than 30 years, SEL has provided industry-leading performance in products and services, local technical support, a 10-year worldwide warranty and a commitment to making electric power safer, more reliable and more economical.
