1 INTRODUCTION

This document specifies the protocol implementation of IEC 61850 for the SEL-3505 Automation Controllers.

This document applies specifically to the models and firmware versions listed here.

Model	Firmware Version
SEL-3505 RTAC	SEL-3505-R122-V0-Z001001-D20121121

2 GENERAL

The following Abstract Communication Service Interface (ACSI) conformance statements are used to provide an overview and details about SEL-3505 Automation Controllers:

- ACSI basic conformance statement
- ACSI models conformance statement
- ACSI service conformance statement

The statements specify the communications features mapped to IEC 61850-8-1.

T3	Supported TimeStamp resolution		20 (1 µs)		Nearest negative power of 2 (in seconds). The value of the TimeAccuracy attribute depends on the time-source accuracy of and variation of the internal clock relative to the time source.
				T0 or T1	For SNTP and NTP, T0 or T1 is typical. If accuracy is less than 10 ms, it will be set to “Unspecified”.
