Power Grid Corporation Chooses SEL for India's First Synchrophasor System

DELHI, INDIA — January 28, 2010 — Schweitzer Engineering Laboratories Pvt. Ltd. (SEL) has contracted with Power Grid Corporation of India Ltd. for the country's first comprehensive synchrophasor system. Power Grid, an electric power transmission provider that handles approximately 45 percent of all electric power generated in India, will install the system at the Northern Region Load Dispatch Center (NRLDC) for four substations.

"Partial grid collapse due to grid disturbances is a common phenomenon in the northern grid of India," said SEL India Regional Sales and Marketing Manager Neeraj Goel. "This system will equip grid operators to act proactively in such contingencies and to carry out system-wide analysis and diagnosis. This is imperative for taking corrective actions and for putting in place certain safeguards to minimize collapses in the first place."

The project includes SEL synchrophasor vector processors and SYNCHROWAVE® archiving and visualization software for the NRLDC. SEL PMUs and four SEL satellite-synchronized clocks complete the system at four remote 400 KV substations.

"Synchrophasor technology offers tremendous benefits to power grid performance," said Dr. Edmund O. Schweitzer, III, SEL founder and CEO. "We are honored to provide our services to Power Grid and its customers in the New Delhi region."

SEL first offered synchrophasor systems in 2001 and now produces over 20 solutions utilizing the technology. For information on these solutions, visit www.selinc.com/p113.

One of the largest transmission utilities in the world, Power Grid operates 120 substations and over 71,000 circuit kilometers of transmission lines throughout India. The company recently received three national awards for meritorious performance in the transmission sector for system availability and early project completion.

SEL serves the power industry worldwide through the design, manufacture, supply, and support of products and services for power system protection, monitoring, control, automation, and metering. SEL offers unmatched local technical support, a worldwide, ten-year product warranty, and a commitment to making electric power safer, more reliable, and more economical.
