SEL Promotes Collaboration and Candor at Its First Conference

PULLMAN, WA—December 14, 2011—Schweitzer Engineering Laboratories, Inc. (SEL) today revealed details about its upcoming Modern Solutions Power Systems Conference in Chicago, Illinois, June 6–8, 2012.

Every day, the world of electric power faces tough challenges, including increased reliability expectations, new regulatory structures, an aging infrastructure, and a growing need to provide economical energy to more people. This is a big responsibility, and it requires the collaboration and creativity of many disciplines, organizations, and industries. That is why SEL created the Modern Solutions Power Systems Conference.

“We know that sometimes the most interesting conversations happen in the hallways at a conference,” said SEL President and CEO Edmund O. Schweitzer, III. “With the Modern Solutions Conference, we have created an event to encourage these same candid, thought-provoking, and often transformative discussions in a place where we can all share and learn from each other.”

This three-day conference offers an innovative and unique opportunity for executives, senior managers, and engineers to break out of their silos, roll up their sleeves, and work together on three critical areas of the modern power system—reliability, cost efficiency, and people. Together, participants will move beyond traditional boundaries to identify opportunities, develop strategies, share best practices, and envision sensible solutions for the industry—today and in the future.

The conference features both business and technical experts who will provide varied perspectives. Attendees will collaborate and exchange insights to develop a more complete understanding of how technical challenges and opportunities affect financial, regulatory, political, and workforce issues in the electric power industry.

The SEL Modern Solutions Power Systems Conference will take place at the Palmer House® Hilton in Chicago. The price is \$1,000 USD per person. Register by May 11, 2012 to take advantage of the early bird rate of \$750.

For more information or to register for this event, please visit www.selinc.com/p137.

SEL serves the power industry worldwide through the design, manufacture, supply, and support of products and services for power system protection, monitoring, control, automation, and metering. SEL offers unmatched local technical support, a worldwide, ten-year product warranty, and a commitment to making electric power safer, more reliable, and more economical.
